GLOBAL SUPPLY

RELIABLE QUALITY

TRUSTED PARTNER

EN590 10PPM ULTRA-LOW SULFUR DIESEL

The Regional Advantage for East African Buyers

Most diesel moving through East Africa today is sold to a legal ceiling that hasn't been tightened in over a decade — and in several markets, there's no accredited lab to verify it against even that. Prime Energy Group supplies genuine 10ppm EN590 ultra-low sulfur diesel, sourced from Black Sea refineries and delivered through Djibouti, fully documented and matched to East African operating conditions.

PRODUCT SPECIFICATIONS

SPECIFICATION	PRIME ENERGY GROUP — 10PPM ULSD	TYPICAL REGIONAL IMPORT
Sulfur Content	10 ppm max (ULSD)	Up to 500 ppm — regional legal ceiling, often unverified
Cetane Number	51.0 min — COA verified	Frequently untested / undisclosed
Lubricity (Wear Scar)	460 μ m max — guaranteed	Rarely tested — critical for injector & pump life
Cold Filter Plugging Point	+12°C max — matched to East African climate (EAS 177)	Inconsistent; rarely documented
PAH Content	11% max — matched to national legislation	Largely unregulated in practice
Quality Documentation	Full COA, traceable Batumi → Doraleh supply chain	Often no accredited lab verification available

WHY IT MATTERS ON THE GROUND

- ✓ Fewer breakdowns — guaranteed lubricity protects injectors and pumps in common-rail engines, generators, marine equipment.
- ✓ Lower maintenance cost — cleaner combustion means less carbon build-up and fewer unplanned shutdowns for fleets and power plants.
- ✓ Climate-matched, not over-engineered — CFPP set to the East African +12°C standard — no cost for cold-weather protection you'll never use.
- ✓ Bankable documentation — full Certificate of Analysis on every cargo — usable for LC compliance, customs, buyer due diligence.
- ✓ Reliable supply chain — Royal Energy LLP → Landy of Bounty FZ.LLC → Prime Energy Group, Batumi to Doraleh, with Free Zone flexibility.
